Dear All,

Just a quick word to share the latest news about JDemetra+:

JDemetra+ on-line documentation

We have published a **new release** today. Although the content is far from being comprehensive, you will find:
- ✓ a new chapter on <u>benchmarking and temporal disaggregation</u>
- ✓ a revised structure, with smaller chapters for improved navigation
- ✓ clearer **illustrations**. For the Graphical User Interface related chapters, they are up to date with version 3.1.1, and differences with version 2.2.4 are highlighted.
- ✓ visual tools, like panels allowing to easily spot differences between version 2 and version 3
- ✓ better cross linking, good searchability
- ✓ a nicer pdf format with dynamic links, available here

Missing content will be progressively uploaded in the coming weeks.

R ecosystem

The R ecosystem keeps growing you can check updates, improved "README's", documentation and latest releases at https://github.com/rjdemetra

A new package has been added recently: **rjd3providers** designed for "Wrangling data providers".

Historically, portability has been an issue when working with workspaces. Now you can, among other things, cleanly **update your data path** (whatever the input format) and still **refresh your data** while moving your workspaces.

We will organize a **webinar** dedicated to the latest features of the R packages for JDemetra+, with a special focus on workspace manipulation, probably in the first week of February 2024. Then, we will provide code chunks and demos.

More on this in the next newsletter.

Reminder: Workshop coming up

A Workshop on Time Series Analysis and Statistical Disclosure Control Methods for Official Statistics will be held at OECD on December 14th and 15th. Hybrid format.
If you want to attend (in presence or remotely) you need to register here:

https://forms.office.com/e/3c817rYFjd

We would be delighted to meet you there!
